**Risk Warning**

The risk/return profile of a fund illustrates the amount of risk undertaken by an investor in order to have a high probability of achieving a particular return on an investment over a period of time. The risk/return trade-off tells us that the higher risk gives us the possibility of higher returns. The risk and return profile of the Prime Reitway Leveraged Global Property RIHFF is based on the portfolio construction methodology applied in order to achieve a level of return over a period of time. In addition to the risk warnings included elsewhere in this document, it is important to note that there are many other risks associated with investing in collective investment schemes. These can include but are not limited to the following: general market risks (such as general movements in interest rates; external factors [war, natural disasters and such like]; changes to the law and regulatory frameworks; governmental policy changes; global, regional or national economic developments), risks related to a specific security (like the possibility of a company's credit rating being downgraded); and loss in the purchasing power of an investment as a result of an increase in the price of consumer goods (known as inflationary risks).

The portfolio may invest in foreign securities. There are potential material risks associated with investing in foreign securities. These include but are not limited to: potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political and social instability, foreign exchange risks, tax risks, settlement risks and potential limitations on the availability of market information, all of which may have an impact on fund performance. In addition, risks associated with investing in emerging markets (which are generally less mature than those in developed markets) include but are not limited to currency risks, the possibility of expropriation, confiscatory taxation or nationalisation of assets and the establishment of foreign exchange controls which may include the suspension of the ability to transfer currency from a given country.

Hedge funds use complex hedging strategies that include the use of leverage to increase the exposure of the portfolio beyond the capital that is employed to an investment. Leveraging includes the use of derivatives. Derivatives derive their value from the value of an underlying asset. The use of leveraging within a portfolio involves risk because depending on how the leveraging is structured, the portfolio's losses or gains may be unlimited. Other risks include counterparty risk and liquidity risk. Counterparty risk is the risk that the other party to a transaction may not be able to perform their obligations. Liquidity risk means that during volatile periods, the tradability of certain instruments may be impeded.

Disclaimer

This is a minimum disclosure document and a general investor report. Collective Investment Schemes are generally medium to long term investments. The value of the participatory interests may go down as well as up. The manager does not provide any guarantee either with respect to the capital or the return of a portfolio. Past performance is not necessarily an indication of future performance. CIS's are traded at ruling prices and can engage in borrowing and scrip lending. Different classes of units apply to these portfolios and are subject to different fees and charges. A schedule of fees and charges and maximum commissions is available on request from the manager. The manager has a right to close portfolios to new investors in order to manage them more efficiently in accordance with their mandates. Commission and incentives may be paid and if so, will be included in the overall costs. Forward pricing is used. The manager may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Income is reinvested on the re-investment date. The Actual investment performance will differ based on the initial fees applicable, the actual investment date and the date of reinvestment of income. Dealing prices are calculated on a net asset value and auditor's fees, bank charges and trustee fees are levied against the portfolios. Performance is calculated for the portfolio, as well as that the individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Income distributions are included in performance calculations prior to deduction of applicable taxes. Performance numbers and graphs are sourced from Collective Endeavours Consulting (Pty) Ltd. NAV to NAV figures have been used. Investment performance is for illustrative purposes only. Investment performance is calculated after taking the actual initial fees and all ongoing fees into account. The reinvestment of income is calculated on the actual amount distributed per participatory interest by using the ex-dividend date NAV price of the applicable class of the portfolio, irrespective of the actual date of reinvestment. Risk profile of the fund ranges from low risk to high risk with a low risk potentially associated with lower rewards and a high risk with potentially higher rewards. A feeder fund is a portfolio that invests in a single portfolio of a collective investment scheme, which levies its own charges and which could result in a higher fee structure for the feeder fund. Foreign securities may be included in the portfolio from time to time and as such may result in the following: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks and potential limitations on the availability of market information. Certain investments, including futures, options, equity swaps, and other derivatives may give rise to substantial risk and might not be suitable for all investors. The daily cut off time is 14:00 for trades and the valuation point is 22:00 daily. Prices are published on Finswitch by 10:00 daily. One can also obtain additional information on Prime Investments products on the Prime Investments website and all price related queries or information is readily available on request. Prime Collective Investment Schemes Management (RF) (Pty) Ltd is a registered Collective Investment Scheme Manager in terms of Section 5 of the Collective Investment Schemes Control Act and is a wholly owned subsidiary of Prime Financial Services (Pty) Ltd, a member of ASISA.
